PRINSO

2023 SOLAR CATALOGUE

GLOBAL

YOUR ONE-STOP-SHOP FOR SOLAR ENERGY SUPPLIES

At PROINSO, we integrate and distribute both products from our strategic manufacturer partners and products developed through our own technology division. We supply the full range of solar PV components including inverters, modules, structures, and complete balance-of-system, ensuring the best coverage for all our projects.

RESPONSIBLE PROCUREMENT

Not all solar is equal. We carefully select and audit our suppliers and partners throughout their lifecycles, including their management, environmental, and occupational health and safety standards. To source materials and suppliers with values and practises aligned with PROINSO Group, we require all our suppliers to have ISO 19001, ISO 14001, OSH 18001 certifications and adhere to the Anti-Slavery Act.

SMA inverters are known for their technological, operating and warranty excellence. SMA portfolio includes a wide range of inverters for all types of modules, coming in a variety of power sizes and applications ranging from households and off-grid systems to industrial systems and solar farms. Inverters manufactured by SMA Solar Technology AG have been officially crowned zero carbon following an independent audit.

Tigo® is a Silicon Valley company founded in 2007 by a team of experienced technologists. Combining a unique systems-level approach with expertise in semiconductors, power electronics, and solar energy, the Tigo team developed the first-generation Smart Module Optimizer technology for the solar industry. Tigo's vision is to leverage integrated and retrofitted Flex MLPE and communications technology to drive the cost of solar electricity down. By partnering with Tier-1 module and inverter manufacturers in the industry, Tigo is able to leverage the broader ecosystem and focus on its key innovation with the smartest TS4 modular platform. Tigo has operations in the USA, Central and South America, the Caribbean, Europe, Japan, China, Australia, the South Pacific, and the Middle East.

PANELS

JinkoSolar (NYSE: JKS) is a global leader in the solar industry with an integrated annual capacity of 10.5 GW for silicon wafers, 7.0 GW for solar cells, and 11.0 GW for solar modules, as of March 31, 2019. Jinko has been repeatedly ranked as the number 1 module manufacturer by global shipments. In addition to being ranked as a top solar brand in debt financed projects, it was named the most "bankable" PV manufacturer by Bloomberg New Energy Finance (BNEF).

TRACKING SYSTEM

Praxia designs and manufactures ground-mount structure installations (both monopile and double-pile), roof-top structures (flat and oriented), solar trackers of single axis and parking shelters. The company is specialised in producing customised structures designed by its engineers according to the calculation regulations of each country, based on the information provided by the client, such as location, type of structure, inclination, panel configuration and geotechnical report.

Clenergy was founded in 2007 in Melbourne, Victoria. A manufacturer and solution provider to the renewables & building industry. We specialize in the development, manufacturing, and engineering of solar mounting & cable management gear for your next project. Be a technology enabler for governments, the public sector & enterprises seeking carbon neutrality. Clenergy believes in a sustainable, clean energy-powered future. Clenergy continues to reinvent our approach, innovate through our technology and service to reach this mission.

Tesvolt specialises in lithium-ion battery storage for commercial enterprises that operates at both low and high voltages and can be connected to all power generators: solar, wind, water, biogas and combined heat and power. The founders worked on their own battery control technology to make their products as durable and economical as possible, resulting in Tesvolt's award-winning battery management system that pays for itself within just a few years.

Relying on the advanced iron-phosphate battery technology, BYD can meet the requirements for energy storage, peak-load shifting and peak load/frequency regulation. By improving supporting facilities for renewable energy generation, promoting ancillary service for the power market, and aiding the transition to clean energy worldwide, BYD is building a clean and sustainable future. BYD has taken the lead in developing a new business model known as PV+Storage, aimed at eliminating bottlenecks in traditional photovoltaic power generation and meeting diverse market needs.
